Thank you for your interest in the installation of an environmentally friendly renewable energy system. Such an installation for your home will allow you to reduce your monthly electricity bill by producing your own electricity. The Grid-Tied Photovoltaic (PV) System will provide a net metering / interconnection interface. Any power produced will be immediately used in the building. Extra power produced will be sent backward through the meter (net metering).

We are ready to help you serve better. Please fill out the basic data for your home or business. IUI will use this data to make a preliminary assessment of a Solar electric system specifically for serving your needs. Thank you!

Name _____
Address _____
City _____ State _____ Zip _____
Phone _____ email _____

What is your **month-by-month** electric consumption during the past 12 months? _____ kilowatt-hours (kWh) . This essential data may be obtained by contacting your utility company or from their web site.

Does your roof have approximately 300 sq ft area, which is shadow free? _____

Can you finance on your home equity loan?

Please send this completed form, along with the monthly electric consumption data from your utility, to our above address. We will contact you shortly with our preliminary assessment of your system.
